# mayahospital.care

## SEO / GEO / AEO Audit Report

FULL AUDIT

| SEO | GEO | AEO |
|---|---|---|
| **8** | **7** | **6** |
| *Strong* | *On Track* | *On Track* |
| Live: 4/10 | Live: 5/10 | Live: 3/10 |

*Scores are for the new build in this repository; live-site scores shown beneath each.*

14 November 2026

Claude Skill and Plugin by Alex Labat

# Executive Summary

Maya Hospital's content is a solid base: six detailed doctor profiles with verifiable credentials, five specialty pages with clean URLs, one H1 per page, alt text on every image and consistent local contact details. The live site, though, gives search engines little to work with: robots.txt and sitemap.xml return 404, no page has a canonical tag, four pages share the homepage title, and share previews on 11 pages point at a domain that doesn't exist.

Most of that is now fixed in the code in this repository (not yet deployed), lifting the scores from 4/5/3 to 8/7/6. The most urgent remaining step is operational: deploy, and switch Vercel so www redirects to mayahospital.care rather than the reverse. The biggest opportunity is content: replace the diagnostic-scan template copy on the homepage and add short, clinician-reviewed answers to the questions patients ask about each procedure.

| Dimension | Live | New build | Status | Key Takeaway |
|---|---|---|---|---|
| **SEO** | **4/10** | **8/10** | Strong | Live site has no sitemap, robots.txt or canonical tags, and 11 share images point at a dead domain. All fixed in code. |
| **GEO** | **5/10** | **7/10** | On Track | Strong doctor credentials, but the homepage hero is template copy and the schema was thin. Schema now models the hospital, departments and doctors. |
| **AEO** | **3/10** | **6/10** | On Track | The FAQ hid 4 of 5 answers from crawlers and had no FAQPage schema. Both fixed. No question-led content beyond the homepage yet. |
| **Combined** | **12/30** | **21/30** | | |

*For reference, the build before this session's fixes (sitemap and canonicals only) scored SEO 6, GEO 5, AEO 3.*

## How this audit was done

Every public page was fetched twice on 14 November 2026: from the live site (https://www.mayahospital.care) and from a local production build of the current code. Signals were extracted from the raw HTML of each page — titles, descriptions, headings, canonical and Open Graph tags, JSON-LD, images, links and word counts — then scored with the rubric below.

Rubric: 1–3 critical issues · 4–5 below average · 6–7 decent foundation · 8–9 strong · 10 exemplary.

# Pages Audited

*19 URLs checked on both the live site and the new build. Notes describe the live site.*

| URL | Page Type | Notes (live) |
|---|---|---|
| / | Homepage | 1 Hospital schema with third-party rating; title "Home - Maya Hospital And Multi-speciality Centre"; FAQ shows 1 of 5 answers in HTML |
| /departments | Department listing | Duplicate homepage title and description; no Open Graph |
| /departments/urology | Department | Good H1; description 208 chars; og:image on mayahospitalmeerpur.com |
| /departments/neurosurgery | Department | Description 205 chars; og:image on old domain |
| /departments/gynecology-obstetrics | Department | Description 209 chars; og:image on old domain |
| /departments/anorectal-surgery | Department | Description 208 chars; og:image on old domain |
| /departments/general-surgery | Department | Description 218 chars; og:image on old domain |
| /doctors | Doctor listing | Duplicate homepage title and description; no Open Graph |
| /doctors/dr-krishna-kumar-bhandari | Doctor profile | Title 102 chars; rich credentials (M.Ch Gold Medal, KGMU) |
| /doctors/dr-shiv-narayan-pandey | Doctor profile | Title 97 chars; DrNB Neurosurgery, AO Spine |
| /doctors/dr-apoorva-shrivastava | Doctor profile | Title 78 chars; description 250 chars |
| /doctors/dr-surbhi-mishra | Doctor profile | Title 72 chars; description 253 chars |
| /doctors/dr-raviraj-singh | Doctor profile | Title 80 chars; also served at /doctors/dr-rajiv-singh (duplicate, no canonical live) |
| /doctors/dr-brijendra-verma | Doctor profile | Title 84 chars; founder profile |
| /consultancy | Booking form | Duplicate homepage title and description; no Open Graph |
| /robots.txt | Crawl directives | 404 on live site; served by the new build |
| /sitemap.xml | Sitemap | 404 on live site; 14 URLs in the new build |
| /llms.txt | AI summary | 404 on live site; added in the new build |
| /departments/gynecology, /doctors/dr-rajiv-singh | Alias URLs | Duplicate content live; canonical to main slug in the new build |

# SEO Analysis

*Live site 4/10 · New build 8/10 (Strong)*

*Status key: Good = working well · Needs Attention = improve · Missing = absent · Fixed = corrected in this repository's code (deploy pending).*

## Technical On-Page

| Signal | Finding | Status |
|---|---|---|
| **Title tags** | 4 of 15 pages (/, /doctors, /departments, /consultancy) share "Home - Maya Hospital And Multi-speciality Centre". All 6 doctor titles ran 72–102 characters. New build: every title unique; 4 of 15 still 61–67 characters. | Fixed |
| **Meta descriptions** | All 15 were over 160 characters (186–276). The homepage one listed Pediatrics, General Medicine, Orthopedics and Joint Replacement, which have no pages on the site. New build: all 15 are 134–158 characters and list the 5 real departments. | Fixed |
| **Heading hierarchy** | Exactly one H1 on all 15 pages. Doctor pages use clear H2s (About, Services, Educational Pedigree & Qualifications). The homepage H1 is "Book your own private healthcare scan & consultation", which doesn't name the hospital or a specialty. | Needs Attention |
| **URL structure** | Clean, keyword-rich slugs: /departments/urology, /doctors/dr-krishna-kumar-bhandari. No parameters. | Good |
| **Canonical tags** | None on the live site, and alias URLs (/departments/gynecology, /doctors/dr-rajiv-singh) serve duplicate pages. New build: self-referencing canonicals on all pages, aliases point to the main slug. | Fixed |
| **Canonical host** | Canonical is https://mayahospital.care, but Vercel currently 308-redirects mayahospital.care to www.mayahospital.care, so every canonical points at a redirect. Flip the redirect in Vercel → Domains. | Missing |
| **robots.txt / sitemap** | Both return 404 live. New build serves robots.txt (allow all) with a Sitemap line, and sitemap.xml with 14 URLs generated from the same data as the pages. | Fixed |
| **Robots meta / viewport / lang** | No accidental noindex; viewport and lang="en" on every page; the 404 page correctly sends noindex. | Good |
| **Image alt text** | 0 of 101 images missing alt. Doctor photos use the doctor's name. | Good |
| **Internal links** | Department and doctor pages cross-link (28–31 internal links each). Image-only links carry alt text, so none are truly empty. | Good |
| **Open Graph / Twitter** | 11 pages' og:image pointed at mayahospitalmeerpur.com, which doesn't resolve, so link previews broke. 4 pages had no Open Graph. New build: all 15 have og:title, og:description, og:image, og:url, og:site_name and og:locale (en_IN), plus Twitter cards. | Fixed |

# Content Quality

| Signal | Finding | Status |
|---|---|---|
| **Word count** | Detail pages carry 475–636 words including navigation and footer; homepage 1,143 (1,240 in the new build, now that every FAQ answer renders). Unique body copy per department is roughly 150–250 words. | Needs Attention |
| **Keyword signals** | Strong local and procedural terms: PCNL, URSL, TURP, FMISS, piles, fistula, plus Hindi terms (गदूद, भगन्दर) that match local search. | Good |
| **Accuracy of claims** | Homepage copy appears to come from a diagnostic-scan template: "Average turnaround under 2 hours", "Over 6 Specialised Departments" (the site lists 5), "Zero Waiting Times", "High-Resolution Diagnostic Imaging & Scans". For a hospital (a YMYL site) unverifiable claims hurt trust. | Needs Attention |
| **Freshness signals** | No published or reviewed dates on any department or doctor page. | Missing |
| **Readability** | Scannable: short paragraphs, bulleted service lists (17 list items per page), clear section headings. | Good |

# Structured Data

| Signal | Finding | Status |
|---|---|---|
| **Schema present** | Live: one Hospital block on the homepage only. New build: JSON-LD on 14 of 15 pages (all except the booking form). | Fixed |
| **Schema types** | New build adds WebSite, Hospital (logo, contact points, departments, founder), MedicalClinic per department with services and specialty, Person per doctor with credentials, BreadcrumbList, ItemList and FAQPage. | Fixed |
| **Schema validity** | All blocks parse as valid JSON. The live Hospital block used a JustDial image and a 5.0/51 AggregateRating copied from JustDial; Google treats third-party or self-served ratings as ineligible. Removed in the new build. | Fixed |

# GEO Analysis

*Live site 5/10 · New build 7/10 (On Track)*

*Status key: Good = working well · Needs Attention = improve · Missing = absent · Fixed = corrected in this repository's code (deploy pending).*

## E-E-A-T Assessment

| Signal | Finding | Status |
|---|---|---|
| **Doctor credentials** | Each of the 6 doctors has degrees, institutions (Grant Medical College Mumbai, KGMU Lucknow), designation, experience and OPD timings. This is the site's strongest trust signal. | Good |
| **About / ownership** | No standalone About page; the homepage links to #about. The founder is identified on Dr. Brijendra Kumar Verma's profile and now in schema. | Needs Attention |
| **Contact information** | Address with PIN 262701 and 3 click-to-call numbers on every page; map link. No email listed (the old addresses were removed as fake). | Good |
| **Trust signals** | Testimonials on the homepage and a JustDial rating claim. No registrations, accreditations (e.g. NABH) or empanelments shown beyond Ayushman Bharat mention. | Needs Attention |
| **Organization schema** | New build: one Hospital entity with @id, logo, founder, 5 departments, specialties, contact points and sameAs (JustDial). No Google Business Profile or social URLs yet. | Needs Attention |

## Content for AI Synthesis

| Signal | Finding | Status |
|---|---|---|
| **Factual density** | Good on doctor pages (degrees, timings, procedures). Department pages list procedures but give few facts an AI could quote (recovery times, anaesthesia, admission days). | Needs Attention |
| **Clear value proposition** | Homepage hero talks about a "private healthcare scan" rather than stating what Maya Hospital is. New meta description and llms.txt state it plainly. | Needs Attention |
| **Entity clarity** | Name appears as "Maya Hospital & Multi Speciality Centre", "Maya Hospital And Multi-speciality Centre" and "Multispeciality Center". Schema now records one name plus an alternateName. | Needs Attention |
| **Source citation** | No references to external medical sources or guidelines. | Missing |
| **Originality** | Doctor biographies are specific and original. | Good |

## Technical GEO

| Signal | Finding | Status |
|---|---|---|
| **HTTPS** | Served over HTTPS on Vercel. | Good |

| Signal | Finding | Status |
|---|---|---|
| **Crawlability** | Pages are server-rendered: full text appears in raw HTML even though pages are client components. No robots blocks. | Good |
| **llms.txt** | Absent live. New build serves /llms.txt with address, phones, departments, doctors and FAQ, generated from the page data. | Fixed |
| **Structured data depth** | New build links Hospital ↔ departments ↔ doctors by @id, so engines can resolve who works where. | Fixed |
| **sameAs / entity links** | Only the JustDial listing. Add the Google Business Profile, Facebook, Instagram or YouTube URLs if they exist. | Needs Attention |

# AEO Analysis

*Live site 3/10 · New build 6/10 (On Track)*

*Status key: Good = working well · Needs Attention = improve · Missing = absent · Fixed = corrected in this repository's code (deploy pending).*

## Featured Snippet Eligibility

| Signal | Finding | Status |
|---|---|---|
| **Direct answers** | The 5 homepage FAQ answers are concise (21–27 words), a little under the 40–60 words that tends to win snippets. Live, only the first was in the HTML; the rest loaded on click. New build: all 5 in the HTML, hidden until opened. | Fixed |
| **Definition patterns** | No "PCNL is…" or "Piles surgery is…" sentences on department pages. | Missing |
| **List content** | Every department and doctor page has bulleted service lists that can become list snippets. | Good |
| **Table content** | No tables (e.g. OPD timings by doctor). | Missing |

## Structured Answer Formats

| Signal | Finding | Status |
|---|---|---|
| **FAQ schema** | None live. New build publishes FAQPage built from the same data the accordion renders, so the two can't drift. | Fixed |
| **HowTo schema** | Not applicable yet; the booking steps could qualify once written as numbered steps. | Needs Attention |
| **Question-phrased headings** | FAQ questions are buttons, not headings; no H2/H3 questions anywhere else. | Missing |
| **Speakable** | No SpeakableSpecification. Low priority — Google supports it only for news publishers. | Needs Attention |

## Voice Search Readiness

| Signal | Finding | Status |
|---|---|---|
| **Conversational coverage** | FAQ covers booking, referrals, 24x7 services, insurance and reports. Nothing answers procedure questions patients ask ("Is laser piles surgery painful?"). | Needs Attention |
| **Local signals** | NAP on every page, geo coordinates and 24x7 hours in schema, "Meerpur, Lakhimpur Kheri" in titles. | Good |

# Priority Recommendations

*Ordered by urgency. "Fixed" items are done in this repository's code and go live on the next deploy.*

| Priority | Issue | Dimension | Effort | Impact | Status |
|---|---|---|---|---|---|
| Critical | Switch Vercel Domains so www.mayahospital.care 301-redirects to mayahospital.care (today it is the reverse, contradicting every canonical) | SEO | Low | High | Open — owner action in Vercel |
| Critical | Deploy the new build: robots.txt, sitemap.xml, canonicals and working share images are still 404/broken on the live site | SEO | Low | High | **Fixed in code, not deployed** |
| High | Replace the scan-clinic template copy on the homepage (H1 "Book your own private healthcare scan", "Over 6 departments", "turnaround under 2 hours", "Zero Waiting Times") | GEO / SEO | Medium | High | Open — needs owner-approved copy |
| High | Unique titles and descriptions for /, /doctors, /departments, /consultancy; trim long doctor and department ones | SEO | Low | High | **Fixed** |
| High | Put all FAQ answers in the HTML and add FAQPage schema | AEO | Low | High | **Fixed** |
| High | Fix og:image URLs pointing at the dead mayahospitalmeerpur.com domain | SEO | Low | Medium | **Fixed** |
| High | Remove the third-party JustDial AggregateRating from Hospital schema | SEO / GEO | Low | Medium | **Fixed** |
| Medium | Add Hospital, MedicalClinic, Person, BreadcrumbList and ItemList schema | GEO | Medium | Medium | **Fixed** |
| Medium | Add 3–5 clinician-reviewed Q&As per department (e.g. "What is PCNL?") as H3 questions with 40–60 word answers | AEO / GEO | Medium | High | Open — needs clinician input |
| Medium | Show "Medically reviewed by Dr. … · Updated <date>" on department pages; add an About page with registrations and accreditations | GEO | Medium | Medium | Open |
| Medium | Add Google Business Profile and social profile URLs to schema sameAs | GEO | Low | Medium | Open — need the URLs |
| Medium | Host the ~50 stylesheet and image assets currently hot-linked from fathimahospital.com | SEO | Medium | Medium | Open |
| Quick Win | Publish /llms.txt generated from the page data | GEO | Low | Low | **Fixed** |
| Quick Win | FAQ answer says reports go out "via WhatsApp or email", but the site no longer lists an email | GEO | Low | Low | Open — copy |

| Priority | Issue | Dimension | Effort | Impact | Status |
|---|---|---|---|---|---|
| **Quick Win** | Make a 1200×630 share image under 300 KB (current default is a 1.9 MB 1437×1094 PNG) | SEO | Low | Low | Open |
| **Quick Win** | Submit sitemap.xml in Google Search Console and Bing Webmaster Tools after deploy | SEO | Low | Medium | Open — after deploy |

# What's Working Well

| | |
|---|---|
| **Doctor credentials** | Every profile lists degrees and institutions — e.g. "M.Ch (Gold Medal) Urology, KGMU Lucknow" and "DrNB Neurosurgery, FMISS, AO Spine" — plus designation, experience and OPD timings. |
| **Clean information architecture** | Logical /departments/<specialty> and /doctors/<name> URLs, one H1 per page, breadcrumbs, and cross-links between doctors and their departments. |
| **Accessible images** | All 101 images across 15 pages have alt text; doctor photos are labelled with the doctor's name. |
| **Local relevance** | Consistent address with PIN 262701, three click-to-call numbers on every page, a map link, and Hindi procedure terms patients actually search for. |
| **Server-rendered content** | All page text is in the initial HTML, so search and AI crawlers can read it without running JavaScript. |

## What this audit can't measure

| Signal | Where to check it |
|---|---|
| Core Web Vitals / speed | Run PageSpeed Insights (pagespeed.web.dev) on the deployed site. |
| Indexing and queries | Google Search Console (coverage, queries, rich-result reports) once the sitemap is submitted. |
| Rich-result eligibility | Google Rich Results Test (search.google.com/test/rich-results) on the deployed pages. |
| Backlinks / authority | Ahrefs, Semrush or Moz; not visible from page HTML. |
| Google Business Profile | Check the profile's name, category, hours and phone match the site exactly. |

# Glossary

**SEO — Search Engine Optimization**
Making pages easy for Google and Bing to crawl, understand and rank: titles, descriptions, headings, canonical URLs, sitemaps and structured data.

**GEO — Generative Engine Optimization**
Making a site easy for AI search (ChatGPT Search, Perplexity, Google AI Overviews, Gemini) to understand and cite: clear entities, verifiable expertise, factual content and machine-readable data.

**AEO — Answer Engine Optimization**
Shaping content so search engines and voice assistants can lift a direct answer: question-led headings, 40–60 word answers, lists, tables and FAQ markup.

**E-E-A-T**
Experience, Expertise, Authoritativeness and Trustworthiness — how Google judges content, weighted heavily for medical ("Your Money or Your Life") sites.

**Canonical URL**
The one address a page should be indexed under, declared with <link rel="canonical">.

**JSON-LD / schema.org**
A block of structured data in the page that tells machines what the page describes (a hospital, a doctor, an FAQ).

**llms.txt**
A proposed plain-text file at the site root summarising the site for AI assistants. Not yet an official standard; cheap to provide.
